

Front-End Development Mastery: Create Your Websites(Online)

Learn HTML, CSS, JavaScript, and Frameworks to Build Responsive and Interactive Websites

WHAT YOU'LL LEARN

- Build modern, responsive websites using HTML, CSS, and JavaScript.
- Design interactive user interfaces with frameworks like React or Angular.
- Master responsive design principles to ensure websites look great on all devices.
- Implement best practices for front-end performance and accessibility.

REQUIREMENTS

A computer with a stable internet connection and a text editor like VS Code.

Basic familiarity with using a web browser and navigating the internet.

No prior coding knowledge required; the course starts with the basics.

A passion for creativity and building visually appealing websites.

WHO'S THIS COURSE IS FOR

Beginners interested in learning front-end web development from scratch.

Designers looking to transition into front-end coding and build interactive websites.

Students and professionals aiming to enhance their skills in web development.

DESCRIPTION

This App Development course will guide you through the process of building mobile applications for iOS and Android platforms. You'll start with **fundamentals of mobile development** and learn how to design and implement user-friendly interfaces using tools like **Flutter** and **React Native**, which allow you to create cross-platform apps from a single codebase.

The course covers the entire mobile development lifecycle, from setting up your development environment to deploying apps on app stores. You will also learn how to manage app data using local storage, integrate APIs for dynamic content, and implement app features like authentication, push notifications, and in-app purchases.

By the end of this course, you will have the skills to develop, test, and
